## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-10 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Kubota et al. (6,465,941) discloses an electron emission element comprising a substrate and a plurality of protrusions protruding from the substrate, wherein each of the protrusions comprises a tip portion (Figure 36A, element 106e) having a sharp end which is located at the top end of the protrusion, a columnar portion (93e) whose side face extends upward relative to the surface of the substrate and which is located below the tip portion, and wherein the side face is provided with a cathode electrode film (25e) electrically connected to a conductive layer (105e) included in the protrusion.

Kubota fails to teach or suggest the protrusions being made of diamond.

The prior art of record fails to teach or suggest the combination of limitations as set forth in claim 1, and specifically comprising diamond protrusions protruding from a substrate, wherein each of the diamond protrusions has a columnar portion extending from the substrate and a tip portion located at the top of the protrusion, in addition to a conductive layer included in the protrusion which is electrically connected to a cathode electrode film formed on the side face of the columnar portions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
